

Environment

Seqwater is a critical part of the urban water supply chain in South East Queensland, delivering a safe, sustainable and valued bulk water supply for more than 3.8 million South East Queenslanders. We also supply water to around 1,200 irrigators and rural customers, supporting Queensland's agriculture and other industries.

We are always looking forward, planning for South East Queensland's water security future and investing in and operating a vast range of water supply assets.

Our operations extend from Gympie in the north, to the New South Wales border in the south, and in the coming years will expand beyond the base of the Toowoomba ranges with the construction of the Toowoomba to Warwick pipeline.

We are one of the largest land managers in South East Queensland and one of the most geographically diverse water businesses in Australia, with many sites comprising significant natural and cultural heritage values.

On behalf of our communities, we provide important catchment health management, access to diverse recreation opportunities, and provide important flood mitigation services that contribute to the liveability and prosperity of South East Queensland.

We are committed to a positive culture of environmental responsibility and stewardship.

To demonstrate our commitment, we will:

- set clear and measurable objectives and targets to manage our environmental impacts and associated risks
- consider customer impacts together with our responsibility to prevent (by avoidance, reduction and/or control) pollution and harm to the environment
- promote initiatives that minimise resource consumption and generation of waste
- protect and, where possible, enhance biological diversity and ecological integrity
- adopt innovative, knowledge driven and risk-based decision making in environmental management and climate change response
- provide training in environmental awareness for our workforce
- promote community benefit and communicate our commitment to future generations through continuous improvement and a positive culture of environmental responsibility and stewardship.
- provide transparent accessible information on our progress and performance.

We will comply with environmental management requirements set by relevant legislation, monitor environmental performance and continually improve through implementation of our Environmental Management System certified to the International Standard ISO 14001.

This Policy aligns to our values of care, respect, courage and integrity which supports everything we do at Seqwater.

This Policy applies to all our employees and contractors and to any person or organisation that acts for or represents us.
