

Sustainability Charter

Water for life - vibrant, sustainable and optimistic urban and rural communities and businesses. That's our vision for the future of South East Queensland.

Seqwater is a regional provider of catchment-sourced bulk water and services. Our business performance depends on catchment quality, community confidence and economic health. Business sustainability – commercial performance in step with the fertile potential of natural and social systems - is critical to our future.

At Seqwater, we believe:

- The community has a natural right to water for life.
- Water for life depends on the ongoing health of complex systems.
- Science underpins knowledge about the complexity of systems.
- Knowledgeable people make the difference.
- Well-framed markets provide incentives for people, communities and businesses to succeed.

We are committed to:

We are all responsible for meeting the challenges and opportunities of operating sustainably. We will measure, monitor and report on our sustainability performance.
